

Our Robust Data Architecture Solutions

We study organizations' data architectures, and develop data pipelines and process flows to ensure alignment between business needs and technologies.

Our Approach

Optimize architectures in ways that properly align business needs to modular, scalable, and API-driven services

Build information models and data catalogs that ensure data is discoverable, compliant, auditable, and governed

Perform gap analysis and suggest future-state architectures

Our Impact

Streamlined data-flow architectures based on modern frameworks and flexible components

Improved understanding of existing data repositories

Sustainable and scalable business operations that enable superior services for end users

Consistent data workflows that facilitate the relationship between provenance and change management

Our Expertise

- ✓ Data streams, integrations, and transformations
- ✓ Databases, data warehouses, and data lakes
- ✓ Reference architectures
- ✓ Data flow pipelines
- ✓ Master data management
- ✓ Disability claims processing
