# Amida

# Our Proven
# *Data Mapping* Solutions

We help create and document the data maps necessary to transform discordant upstream sources for consumption by downstream applications.

## Our *Impact*

## Our *Approach*

- Examine and evaluate legacy data-flow schematics
- Create the maps that transform data assets into standard structures and formats
- Implement data transforms using your organization's existing framework or one we create bespoke for you

Quicker processes to onboard new sources of data

Improved interoperability between internal and external systems

Better visibility into and understanding of data

Superior business analytics

## Our *Expertise*

- Conceptual, logical, and physical data modeling
- Manual, schema, and automated data mapping
- Deterministic and probabilistic data matching
- Health data formats (FHIR, HL7, and CCD)
